Validation of species name *Trentepohlia ampla* in the genus *Trentepohlia* (*Trentepohliales, Chlorophyta*)

Daniel E. Wujek, *Biology Department, Central Michigan University, Mount Pleasant, Michigan 48859, USA* (correspondence: wujek1de@cmich.edu)

The genus *Printzina* was described by Thompson & Wujek (1992), with *P. lagenifera* (Hildebrand) R.H.Thompson & Wujek as the generitype. The genus was differentiated from the genus *Trentepohlia*. In their description of the new genus *Printzina,* Thompson & Wujek (1992) described a new species, *P. ampla*, and they attempted to transfer several other *Trentepohlia* species to their newly delineated genus. These proposed names, however, were not valid because of a failure to cite the exact pages of the place of publication of their basionyms as required by ICN Art. 41.5 (Turland *et al*. 2018). The species that had been placed in the genus *Printzina* have since all been shown, using molecular phylogeny (Rindi *et al*., 2009; Zhu *et al.,* 2017), to be scattered amongst the many clades that comprise the genus *Trentepohlia*. Molecular genomics did not support retention of any species in the genus *Printzina*. The present note rectifies this issue for the taxon *Printzina ampla*.

Trentepohlia ampla (R.H.Thompson & Wujek) *comb. nov.*
